一、安装samba

```
sudo apt-get update
sudo apt-get install samba
```

二、创建samba账户
可以新建账户也可以用已有账户

```
 hero@debian:~$ sudo smbpasswd -a hero
[sudo] password for hero:
New SMB password:
Retype new SMB password:
Added user hero.
```

三、修改配置文件

sudo vim /etc/samba/smb.conf

添加以下内容，这里设置根目录为可访问目录

```
[hero]
  comment = Hero samba
  path = /
  available = yes
  browseable = yes
  writable = yes
  valid users = root,hero
  public = yes
```

重启samba

sudo /etc/init.d/samba restart
